

Burj Khalifa

📍 Dubai, UAE

☰ Infinite Veneer

A holistic modern restroom design that ensures maximum privacy

The project.

Burj Khalifa was designed as the anchor of a large scale, mixed-use development in Downtown Dubai. The skyscraper sits alongside homes, hotels, the Dubai Mall and the 30 acre man-made Burj Khalifa Lake.

Standing at 2,722ft, it is a feat of award winning design and engineering which broke numerous records, including its designation as the tallest building in the world. It is a story of unprecedented international collaboration and a symbolic beacon of progress in the Middle East.

The challenge.

The architect's vision was a stunning work of art and engineering. The interiors were inspired by local culture while staying mindful of the building's status as a global icon. Warm, harmonious and luxurious spaces combined with elegant design.

The Venesta team rose to the challenge to create a washroom solution which reflected the first class standards of design, performance and reliability throughout the building.

The solution.

We were delighted with the client's choice of Infinite Veneer, a premium toilet cubicle range which is consistent with the outstanding image of the building. Stylish real wood veneers, in American Black Walnut, offered a rich, earthy tone to spice up a modern classic. This attention to detail provided Burj Khalifa with the deluxe washroom they were after.

Flush fronted washroom cubicles, floating pilasters, and minimalist fittings combine to form an innovative sleek design and echo the high quality appearance of the building itself.

Infinite Veneer is part of our V3 premium range for quality craftsmanship and style-led finishes. And as no two real wood grains are the same, it just adds to the high end, luxurious feel of every individual installation.

Venesta is proud to have been part of such a prestigious project; working closely with international designers to deliver a product which lives up to the 5* destination.
